

New! To Enhance Your **Raceclock™** Operation

Introducing The *Raceclock Wireless System Receiver*

- **Works with Electro-Numerics XL-Series (LED digit) and LM-Series (Flip digit) Raceclocks**
 - Plugs into the “Remote Control” port of your Raceclock
 - Powered On/Off with Raceclock’s power switch
- **Supports Wireless Connection of up to 4 different devices simultaneously:**
 - **TM Wireless Raceclock Interface** – to control or synchronize Raceclocks or display results
 - **Wireless Keypad** - to manually control one or more Raceclocks simultaneously
 - **Wireless Grip Switches** – to start/stop/enter splits or display splits (up to 10 can be assigned)
 - **Wireless Gun Start** – to automatically start Raceclock using a starting pistol
- **User programmable non-volatile memory**
- **Features a simple-to-use “Assign Device” push-button switch allowing user to:**
 - Assign a new device into memory
 - Replace an old device with a new one
 - Remove a specific device from memory
 - Remove all device assignments from memory
